MOUNTING ON CASEMENT		WIN	pair	S
Mounting clips		P-WIN		14
Guiding cord with bottom fixation		P-CS01WIN		12

The WING system reliably solves the problem of mounting blinds directly on casements. Ingeniously designed clamps enable fixation of the blind on the window without damaging its casing. It is necessary to consider the placement of the handle and to realize, that if there is a wall in the direction in which the window opens, it will not be possible to fully open the window anymore. It is also necessary to consider minimum manipulation space above the casement to enable fixation of the clamps. The clamps come in white and grey.
