There is not an easier way to mount a blind than with a mounting profile. Thanks to the MP it is no longer necessary to fix the blind to the wall with brackets and multiple screws. All you have to do is prepare a few clips depending on the width of the profile and then just snap it on. Subtle profiles are extruded from quality aluminium and are available in 3 basic colours - white, grey and black. It is possible to have the profile lacquered in any RAL or NCS colours together with other components for a surcharge. The mounting profile can be ordered for blinds up to 3 m width.
